That's story about decline in TSDFs is what Jeff was interested in and remembered as dramatic.

The data is available. We should talk to Chun Liu about how to run that data. I have seen similar pulls in the past. In 1980 we had hundreds, if not over a 1000, registered TSDFs.

I forgot that Jeff has asked us to look into whether we can pull historic data that compares the number of RCRA permitted facilities in California today as compared to 10 or 20 years ago. At the Exide meeting folks complained that we never close RCRA facilities, which I think is focused on denying permits when in fact many facilities have decided to no longer fall under RCRA permits and/or some have gone through closure. Do you think this data is available? Also, it would be helpful to have a list of facilities in California in the current baseline that are going through closure. Thanks, Tom
